

J-Type Bulkhead

BULKHEAD

Trelleborg AVS defense portfolio includes both “deck” and “bulkhead” versions of J type shock mounts. Like other shock mounts, all J-type shock mounts are registered under NATO Stock Numbers (NSN). Trelleborg AVS-NL CAGE code is H0040. The asymmetric version of the J-mount is often referred to as the “bulkhead” version because of its shape that requires less installation space. These J-mounts are highly efficient shock isolators as their lifetime is limited by the event of the shock itself and their replacement inexpensive. After being exposed to shock the J-mount needs to be replaced to re-ensure protection of the equipment. The J-mount is often used for non-vital equipment without a vibration source, such as switch cabinets and electronic equipment.
